OBJECTIVE

Informatics Engineer with a degree in Software Engineering (Class of 2022), specializing in web development. Proficient in building dynamic, user-centric websites using modern tools and technologies such as WordPress, Elementor, and front-end development techniques. Possess foundational knowledge in back-end development and database management. Highly motivated to continuously enhance skills, embrace new challenges, and contribute to impactful web projects by combining technical expertise with creative problem-solving.

Technical Skills

WordPress Development

- Skilled in creating WordPress websites from scratch using Elementor and Elementor Pro.
- Ability to modify existing themes and templates to meet project requirements.
- Capable of researching and selecting the right plugins for specific site functionalities.
- Familiar with basic plugin and theme development, with a strong desire to expand knowledge in customizing or creating plugins and themes.

Front-End Development

- Experience with React, including creating small projects that involve building user interfaces, adding, updating, and deleting data.
- Knowledge of HTML, CSS, and JavaScript for responsive and interactive web designs.

Back-End Development

- Experience with Laravel, including building databases, APIs, and integrating them with front-end frameworks like React.
- Developed a billing system that allowed adding, updating, and deleting product information, generating invoices, and storing them in a database.

- *Proficient in using Artificial Intelligence tools and Git for version control.*
- *Always eager to learn new technologies and enhance my skills, with a strong drive to continuously improve and grow professionally.*

EXPERIENCE

Weblandscape – Web Developer

September 2024 – December 2024

- Worked on modifying the company's website using Laravel and databases.
- Developed three main pages:
    - Payment page using Stripe gateway.
    - Appointment scheduling page.
